

Betsegaw Merid

B.Sc. Electrical & Computer Engineering Student | Full-Stack Developer | Networking & Embedded Systems

About Me

Electrical and Computer Engineering student expected to graduate in 2027, with a strong foundation in software development, networking, databases, embedded systems, and problem-solving. Experienced in developing practical engineering solutions and full-stack web applications through academic and team-based projects. Fast learner with hands-on experience in React, Node.js, Express.js, PostgreSQL, Prisma ORM, REST APIs, authentication, and Git/GitHub collaboration. Interested in software engineering, networking, and intelligent technology solutions.

betsegaw.merid@aastustudent.edu.et

Addis Ababa Ethiopia

Skills

- Programming: C, C++, JavaScript, TypeScript
- Frontend: React, HTML, CSS, Vite
- Backend: Node.js, Express.js, REST APIs
- Database: PostgreSQL, Prisma ORM
- Authentication: JWT, bcrypt/bcryptjs
- Tools: Git, GitHub, VS Code
- Engineering: Arduino, Embedded Systems, Sensors, Robotics
- Other: Networking, Problem Solving, Teamwork, Communication

Language

- English
- Amharic

Education

- **(2022 – 2027)** **ADDIS ABABA SCIENCE AND TECHNOLOGY UNIVERSITY**
Bachelor of science in electrical and computer engineering

PROJECT EXPERIENCE

SmartRent ET | Full-Stack Software Engineering Project 2026

- Collaborated on a full-stack rental management web application.
- Developed and integrated a React + Vite frontend with a Node.js/Express backend.
- Implemented login and registration using JWT and bcrypt, with PostgreSQL and Prisma ORM.
- Used Git/GitHub for team collaboration and contributed to backend deployment on Render.

Experience

AASTU | Jan 2024 – Jan 2025

HARDWARE & SYSTEMS ENGINEER

- Co-designed an Arduino-controlled, sensor-guided robotic arm for autonomous coffee harvesting
- Programmed movement and ripeness-detection logic for precise, fully automated picking cycles

Academic Project | 2026

NETWORK INFRASTRUCTURE RESEARCHER

- Researched AI and Machine Learning models to optimize LAN traffic and dynamic bandwidth allocation.
- Proposed Software Defined Networking (SDN) frameworks to prevent network congestion.
